

pIMAGO®-biotin Phosphoprotein Detection Kit
For Western Blot
Fluor 680-based detection

Store at 4°C

Cat. # 802-40
1 Kit
(40 mini-blot)

This product is for *in vitro* research use only and is not intended for use in humans or animals.

Introduction.

pIMAGO is a universal phosphoprotein detection technology that enables sensitive and specific recognition of phosphorylated molecules. Unlike phospho-antibodies, the binding is not biased by amino acid sequence, and therefore can be used for detection of any phosphorylation event on any protein site. pIMAGO detection protocol resembles a simple Western Blot procedure and can be easily incorporated by any laboratory.

Results.

pIMAGO analysis of 6 protein mixture (2 phosphoproteins) avidin-HRP or avidin-Fluor detection.

pIMAGO analysis of *in vitro* kinase assays using avidin-HRP (left) or avidin-Fluor (right) detection.

Kit components.

- ✓ 400µL of pIMAGO reagent
- ✓ 400µL of avidin-Fluor 680
- ✓ 2mL of 5x IAA
- ✓ 80mL of 10x Blocking buffer
- ✓ 80mL of 5x pIMAGO buffer
- ✓ 240mL of 10x Washing buffer
- ✓ 400µL of control phosphoprotein
